

Decipher Mechanisms of Gene Expression Changes with Single-Cell Multiomics

ResolveOME Whole Genome and Transcriptome Amplification System

Enables whole genome and transcriptome sequencing from a single cell

Uses a single cell for the construction of a whole-genome and full-length mRNA transcriptome library

Provides industry-leading genomic coverage and resolution

Leverages a novel patented technology, primary template-directed amplification (PTA), to dramatically increase genomic capture and coverage to 97%^{1,2}

Superior transcriptome capture and coverage

Increases gene body coverage, representation across transcript sizes, and variant calling versus droplet-based RNA sequencing methods^{3,4}

Fits into established laboratory protocols

Compatible with various methods of single-cell singulation, sequencing platforms, and downstream applications, including whole exome and panel-based sequencing⁴

Scales to experiment size

Low-cost, scalable approach with up to 96 reactions per kit

Bioinformatics analysis included

Bioinformatics analysis and data visualization through BaseJumper® bioinformatics platform

Assay Performance

ResolveOME WGS DNA Performance	
Accuracy	99.99%
Sensitivity	96.65%
Specificity	99.99%
Allelic Balance	91.20%
Genomic Coverage	97.59%
ResolveOME WTS RNA Performance	
Protein Coding Genes	3451 ± 732
Concordance	0.97
Variance (CV)	32.9%

Figure 1: Assay Performance Characteristics. Analysis of NA12878 single cells prepared with ResolveOME Whole Genome Single-Cell Core Kit versus gold standard reference. WGS: whole genome sequencing, WTS: whole transcriptome sequencing.

ResolveServicesSM

Custom-built service projects, from singulating cells to figures. Services can include:

- Cell and/or nuclei sorting from fresh or frozen cells and tissues
- Whole genome amplification or whole genome and transcriptome amplification
- Exome capture or targeted protein analysis
- Library preparation for downstream applications
- Analysis using our bioinformatics platform, **BaseJumper[®]**, or bespoke computational analysis

Products

Codes	Product	Description
100956	ResolveOME™ Whole Genome and Transcriptome Single-Cell Core Kit	PTA-based kit for accurate and reproducible whole genome and transcriptome amplification plus sequencing library preparation from single cells. 96 reactions per kit.
100954 100955	ResolveDNA® Whole Genome Single-Cell Core Kit	PTA-based kits for accurate and reproducible whole genome amplification plus sequencing library preparation from single cells. Kits available with 96 or 384 reactions.
100605	BaseJumper® Bioinformatics Platform	A complete bioinformatics solution for multiomic data analysis and visualization.
Early-Access Only	ResolveXOME™ Exome Capture Module	Exome capture module for use with ResolveDNA Whole Genome Single-Cell Core Kit.
